Frontend Engineer with 5 years of experience building data-intensive SaaS applications, specializing in React, GraphQL/Apollo, and state management for performant UIs. Proactively works across frontend, backend, and infrastructure layers to unblock development, having owned features end-to-end across ESG reporting and manufacturing.

EXPERIENCE

Associate Software Engineer

June 2025 – Present

ISS STOXX (Institutional Shareholder Services)

Mumbai

- Owned end-to-end delivery of a multi-step **Field Mapping UI** for an ESG data platform, designing an **async workflow (S3 uploads, polling, pagination bucketing)** that let users map their Excel column headers to system-expected fields before pipeline ingestion.
- Eliminated duplicate GraphQL queries and unnecessary refetches by configuring Apollo **InMemoryCache keyFields** and refactoring shared hooks.
- Moved data filtering logic from client-side JavaScript directly to the **Postgres database** using Hasura GraphQL query predicates, reducing data transfer size for heavy export pipelines.
- Led the integration of the **IFRS framework** by replacing hardcoded frontend logic with a dynamic, **database-driven approach** using GraphQL and Apollo Client.
- Resolved **API Gateway timeouts** by enabling direct React-to-Java communication; mentored the backend team on **Auth0-based authentication** (PKCE, JWT, JWKS) and fixed CORS configuration issues.
- Implemented **user tracking** by adding identity headers via React Context and forwarding them through the Node.js layer using **AsyncLocalStorage**, removing the need for manual changes across **30+ API handlers**.
- Contributed to a **MySQL to SQL Server migration** by translating 14 undocumented ORM queries into stored procedures; identified missing FK constraints and a non-deterministic aggregation bug caused by the disabled **ONLY_FULL_GROUP_BY** SQL mode, and rewrote the affected queries with explicit aggregations.

Software Engineer

June 2021 – May 2025

Tata Consultancy Services

Mumbai

- Built scheduling features, real-time dashboards, and Excel export workflows in React for a manufacturing SaaS platform serving **500+ plant operators**.
- Remediated **10+ security vulnerabilities** in AWS Lambda functions by migrating plaintext credentials to AWS Secrets Manager, meeting enterprise compliance requirements.
- Validated **20+ APIs** during a database migration, identifying and documenting edge cases through structured **Postman testing**.
- Maintained **95%+ code coverage** with Jest and Enzyme, enabling confident refactoring and stable releases.

PROJECTS

Real-Time Manufacturing Analytics Platform | *React, Node.js, Highcharts, PostgreSQL*

- Built an **interactive React dashboard** to visualize live sensor values and machine performance data on a digital shop floor layout, allowing operators to filter and monitor plant operations in real-time.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML/CSS, SQL

Libraries & Frameworks: React, Node.js, GraphQL, Apollo Client, Redux, React Router, Jest, Enzyme, Material-UI, Tailwind CSS, SASS, LESS, Babel

Tools & Architecture: Auth0 (PKCE), Git, Hasura, Nhost, AWS, Webpack, GitHub Copilot, SonarQube, REST APIs

EDUCATION

Dwarkadas J Sanghvi College of Engineering, Mumbai University

2021

Bachelor of Engineering (B.E.) | 8.7 CGPA
